

SUMITOMO DRILL REGRIND PROGRAM

...Get The Original Point...

FOR MDS and KDS Style Drills

DON'T SETTLE FOR A COPY

Request the original drill point geometry from the innovator of successful solid carbide drills and their application. Competitors' products may look similar, but their performance is definitely not equal.

Many regrind sources do their best to give you an original Sumitomo point...but don't be convinced they are capable of reconditioning our products to their original geometry specifications or performance.

STATE-OF-THE-ART FACILITY

Our plant located in New Berlin, Wisconsin, contains the newest, state-of-the-art manufacturing equipment available today.

TOOL PERFORMANCE

In order to maintain consistent tool life after regrinding, the same, original steps taken to produce a brand new drill are also reapplied to our reground drills - same equipment, same rigid quality control checks, same high standards of recoating technology.

GET THE POINTS AND BENEFITS

- ✓ The highest tool performance
- ✓ Original manufacturing processes
- ✓ 100% and original quality inspection processes
- ✓ Quick delivery - 10 to 15 working days from receipt of product (for general re-service needs)
